

## How are Psychological Disorders Diagnosed?

Chapter 3- Classifying Abnormality: Diagnosis, Assessment, and Research

1

---

---

---

---

---

---

---

---

## Class Objectives

- Historical Perspectives
- What is Clinical Assessment and why is it used?
- What assessment methods do professionals use?
- How are psychological disorders diagnosed?

2

---

---

---

---

---

---

---

---

## “In Order to Understand the Future it is necessary to know and understand the past”

Psychopathology in a historical Context

3

---

---

---

---

---

---

---

---

Where did it all begin?

- Abnormal behavior and psychological disorders have been documented for thousands of years.
- Although many early “treatments” are now recognized as cruel and ineffective, they were considered state-of-the-art for their times.

4

---

---

---

---

---

---

---

---

Treatment was influenced by the social perception of mental illness

- Very early in history (500-700 A.D) the problem was based on the medical model
  - disorders may have natural causes and should be treated as a disease

---

---

---

---

---

---

---

---

Later in history (500-1700 A.D) due to the influence of the church witchcraft and demonic possession were common explanations for mental illness.

---

---

---

---

---

---

---

---

1700-1900 A.D

☐ People with psychological disorders or "madmen" were seen as dangerous animals who \_\_\_\_\_

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

These are some of the "treatments" that were used to \_\_\_\_\_

Since mental illness was not seen at this time as a medical condition, the treatments did nothing to \_\_\_\_\_

---

---

---

---

---

---

---

---

## Mental Health Reform

The unfortunate results of the Mental Hygiene Movement:

- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

---

---

---

---

---

---

---

---

Until the 1970's, most people with mental illness were warehoused in psychiatric institutions. The conditions in most psychiatric hospitals were terrible and often inhumane.

These conditions contributed to the

---

---

---

---

---

---

---

---

## Deinstitutionalization

This federal policy shifted treatment from

- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

---

---

---

---

---

---

---

---

### Did it work as promised?

- ☐ Deinstitutionalization has been criticized for \_\_\_\_\_
- ☐ Accounting for a very large percentage of the \_\_\_\_\_
  - 1/3 of homeless adults suffer from severe psychological disorders (NIH, 2003).
- ☐ The community mental health movement has had many successes, but continue to remain \_\_\_\_\_

13

---

---

---

---

---

---

---

---

### Assessment

How are psychological disorders evaluated?

14

---

---

---

---

---

---

---

---

### What is Clinical Assessment?

☐ Clinical assessment is a systematic evaluation and measurement that measures:

- Psychological \_\_\_\_\_
- Social factors

☐ in a person who \_\_\_\_\_

15

---

---

---

---

---

---

---

---

## Clinical Assessment

Only after \_\_\_\_\_ can a *diagnosis* be given.

- This is the process of determining whether a presenting problem

\_\_\_\_\_  
\_\_\_\_\_

16

---

---

---

---

---

---

---

---

The diagnosis of a psychological disorder represents a way of

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

17

---

---

---

---

---

---

---

---

Why is it important to have a process for assessing and diagnosing people?

18

---

---

---

---

---

---

---

---

Classification promotes  
Universal standards

- ☐ Classification is the core of scientific study, which allows \_\_\_\_\_
- ☐ Classification facilitates research on etiology and treatments of disorders, including best practices.
- ☐ To be diagnosed with a psychological disorder very specific criteria must be met.

19

---

---

---

---

---

---

---

---

There is much debate on the  
classification of mental  
disorders

Some feel that diagnosis of psychological disorders do more harm than good, fail to truly address the individual's problem and \_\_\_\_\_

20

---

---

---

---

---

---

---

---

What makes an assessment method  
valuable?

- ☐ Reliability:
  - \_\_\_\_\_ measurement, or category system
  - Is the degree of measurement consistent?
- ☐ Validity
  - \_\_\_\_\_ measurement, or category system
  - Does the assessment measure what it is designed to measure?

21

---

---

---

---

---

---

---

---

## Clinical Interview

Information is gathered by the professional by

---

- Current and past behavior
- Attitudes and emotions
- Social and interpersonal history
- Presenting problem
- Orientation

---

---

---

---

---

---

---

---

## Clinical Description

A presenting problem typically refers to the specific problem that brought the person in for help.

---

23

---

---

---

---

---

---

---

---

## What's the Presenting Problem?

Patricia was referred to the crisis center for suicidal thoughts and suicide attempt which followed an argument with her boyfriend. Patricia ingested a bottle of prescription pain medication and drank small amounts of a household cleaning product. Patricia was once hospitalized for major depression and suicidal statements.

24

---

---

---

---

---

---

---

---

**What was the presenting problem?**

\_\_\_\_\_

\_\_\_\_\_

25

---

---

---

---

---

---

---

---

**Clinicians are interested in:**

- ▣ \_\_\_\_\_ - pattern of the disorder in time
  - Described as either chronic, episodic, or time-limited
- ▣ *Prevalence* - \_\_\_\_\_ the population with a disorder
- ▣ *Incidence* - The \_\_\_\_\_ of a disorder in a certain time period, usually per year
- ▣ \_\_\_\_\_ - future development
- ▣ *Etiology* - \_\_\_\_\_ of the disorder

26

---

---

---

---

---

---

---

---

**Mental Status Exam**

- ▣ A systematic observation of a person's behavior
  - \_\_\_\_\_
- ▣ Used by clinicians to determine whether or not a psychological disorder may be present.
- ▣ Most people do this everyday...including you ☺

27

---

---

---

---

---

---

---

---

What are some things you observe when you meet someone for the first time?

28

---

---

---

---

---

---

---

---

Mental status exams cover five general areas:

- Appearance and behavior
  - Overt physical behaviors, appearance, body language, facial expression
- \_\_\_\_\_
  - Are thoughts linear and organized?
  - Are there delusions/hallucinations present?

29

---

---

---

---

---

---

---

---

Assessing Thought Processes

- ☐ Looseness of association (irrelevance)
- ☐ Flight of ideas (rapid change of topics)
- ☐ Word salad (nonsensical responses)
- ☐ Clanging (rhyming words)
- ☐ Poverty (limited content)

30

---

---

---

---

---

---

---

---

**Mental Status**

3. Mood and affect:

☐ Mood is the \_\_\_\_\_

- Depressed, 'anxious,' 'good,' and 'tired
- Does the person appear "down" or elated?

☐ \_\_\_\_\_ refers to the feelings or outward show of emotions

- Is it "appropriate"? You feel sad...you look sad.
- Euthymic (normal), blunted (minimal variation), and flat affect (no variation).

31

---

---

---

---

---

---

---

---

**Mental Status**

4. Intellectual functioning:

☐ Vocabulary and memory testing are used to help determine level of intellectual functioning

- Repeat these 3 words: 'pen,' 'chair,' 'flag'
- The 'serial 7s'
- Abstracts and metaphors
- Proverbs

32

---

---

---

---

---

---

---

---

**Mental Status**

5. \_\_\_\_\_ refers to our general awareness to our surroundings.

☐ Clinicians assess a person's orientation to time, place and person.

☐ "Is the person oriented times 3?"

- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

---

---

---

---

---

---

---

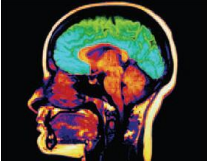

---

## Other Forms of Assessment

Cognitive Tests

Biological Tests

Projective Tests

---

---

---

---

---

---

---

---

## Standardized Tests

There are literally hundreds of standardized tests clinicians can use for assessment purposes.

- 1. Symptom and personality questionnaires
- 2. Projective Tests
- 3. Cognitive Tests
- 4. Biological Tests

35

---

---

---

---

---

---

---

---

## Symptom and Personality Questionnaires

Tests \_\_\_\_\_ or personality traits based on clients' responses to structured questions

\_\_\_\_\_

- Beck Depression Inventory-II (BDI-II)
- Minnesota Multiphasic Personality Inventory-2 (MMPI-2)

36

---

---

---

---

---

---

---

---

**TABLE 3.9** Sample Items and Instructions from the Beck Depression Inventory-II (BDI-II)

Date: \_\_\_\_\_

Name: \_\_\_\_\_ Birth Date: \_\_\_\_\_

On this questionnaire are groups of statements. Please read each group of statements carefully. Then pick out the one statement in each group which best describes the way you have been feeling the PAST WEEK, INCLUDING TODAY. Circle the number beside the statement you picked. If several statements in the group seem to apply equally well, circle each one. Be sure to read all the statements in each group before making your choice.

**Item 1. Sadness**

|   |   |
|---|---|
| 0 | I do not feel sad.                            |
| 1 | I feel sad much of the time.                  |
| 2 | I am sad all the time.                        |
| 3 | I am so sad or unhappy that I can't stand it. |

**Item 2. Pessimism**

|   |  |
|---|--|
| 0 | I am not discouraged about my future.                      |
| 1 | I feel more discouraged about my future than I used to be. |
| 2 | I do not expect things to work out for me.                 |
| 3 | I feel my future is hopeless and will only get worse.      |

---

---

---

---

---

---

---

---

---

---

 Advantages:

\_\_\_\_\_

\_\_\_\_\_

 Limitations:

- Standardized tools sacrifice flexibility in the collection of information

---

---

---

---

---

---

---

---

---

---

## Projective Tests

Individual's \_\_\_\_\_  
 reveal information about emotional and mental functioning

---

---

---

---

---

---

---

---

---

---

**Advantages:**

- These assess client's deeper, and less easily observable emotion and personality patterns by providing a psychological understanding of clients.

**Limitations:**

- \_\_\_\_\_
- \_\_\_\_\_

40

---

---

---

---

---

---

---

---

## Biological Tests

**Tests that are used to \_\_\_\_\_**

---

few are currently useful in assessing mental disorders

**Brain imaging and scanning:**

- Computerized axial tomography (CAT)
- Positron Emission Tomography (PET)
- Functional MRI (FMRI)
- Brain Dissection/Autopsy
- Physiological Tests

41

---

---

---

---

---

---

---

---

## Diagnosing Psychological Disorders

42

---

---

---

---

---

---

---

---

## How are disorders diagnosed?

The \_\_\_\_\_ (APA, 2000) is the most widely used classification system currently used to make a diagnosis.

This is a manual that contains a listing of psychiatric disorders and diagnostic codes

43

---

---

---

---

---

---

---

---

## DSM-IV

Each disorder is defined by a set of diagnostic criteria and text containing information about the disorder.

- prevalence
- familial patterns
- age
- culture
- differential diagnosis

44

---

---

---

---

---

---

---

---

No information about treatment or *etiology* is included.

45

---

---

---

---

---

---

---

---

## History of the DSM

- ❑ The first edition of the DSM was published in 1952 and contained about 60 disorders.
- ❑ The DSM -I and II were very influenced by the \_\_\_\_\_
- ❑ There was no sharp distinction between "normal and abnormal"

---

---

---

46

---

---

---

---

---

---

---

## DSM III

- ❑ In 1980, the Psychodynamic view was abandoned and \_\_\_\_\_
- Changes were made to the diagnostic system based on scientific data, not consensus of experts.
- ❑ This DSM examined the *reliability* and *validity* of definitions and criteria, as well as creating new diagnoses (Wildiger et al., 1998).

47

---

---

---

---

---

---

---

## DSM IV The current standard

- ❑ New disorders were introduced and other deleted in the *DSM IV*.
- ❑ Example- in the *DSM-II*, homosexuality was listed as a psychological disorder, but was removed by the APA in 1973.
- ❑ The *DSM-V* is in progress (2010-2012)

48

---

---

---

---

---

---

---

DSM V is a "multi-axial" system of classification.

- Axis 1 - \_\_\_\_\_  
- Mood disorders, Schizophrenia, Anxiety disorders etc...
- Axis 2- Personality Disorders/Mental Retardation  
\_\_\_\_\_
- Axis 3- \_\_\_\_\_ conditions and disorders
- Axis 4- Psychosocial Stress
- Axis 5- (GAF)Global Assessment of Functioning

---

---

---

---

---

---

---

---

Is this system perfect?

- One criticism of the DSM IV is the notion of \_\_\_\_\_ the presence of two or more disorders in an individual at the same time.
- Some criticize this categorical system because it \_\_\_\_\_

---

---

---

---

---

---

---

---

Next class...

- Anxiety Disorders

---

---

---

---

---

---

---

---
